Business & CIRT News

A force for positive change in the design / construction industry

5/13/2015 – ConsensusDocs Offers New Platform Tool for Users

The coalition of organizations (which CIRT is a member) responsible for the creation and distribution of ConsensusDocs just announced that it is releasing a new platform tool to help document users. Over the years, users have often found that after they finalized a contract they required additional changes. The prior system required a multi-step process to accommodate such changes to the “completed/finalized” contract; however the “new” or revised contract would not be in the same “Negotiation” as the prior versions. Creation of this new tool allows users to *refinalize* a contract with the click of a button. [To learn more about this and other features in the ConsensusDocs, go to [User Guide](#)].

With a catalog of 100+ standard design and construction contracts, ConsensusDocs contracts help CIRT members reduce costly claims and risk contingencies by fairly allocating risk and incorporate best practices with understandable contracts that facilitate contract administration. The *ConsensusDocs Technology Platform* allows you to easily edit contracts in Microsoft Word® with the flexibility to collaborate via the cloud or work off-line.

ConsensusDocs are the only standard contracts endorsed by 40+ leading design and construction industry associations, including CIRT. Round Table members receive a **20% discount** on all ConsensusDocs packages by using Discount Code: CIRT100 at www.ConsensusDocs.org.
